

Designed and built with the operator in mind

MP8000

Available in 13 to 37 yard bodies

Designed, engineered and built for ease of operation

Owners, mechanics and operators contribute to the highly productive MP8000

The MP8000 is the most thought through refuse/recycling body built. Our design team spent countless hours with owners, mechanics, and operators to obtain their thoughts and opinions on what makes a great body. We have taken this information and combined it with our engineering to build what we believe is the most versatile unit on the market.

We start with a safe and stable horizontal unloading system. Second, our large volume receiving hoppers are located so the operator has easy access to them. Other features include simple uncomplicated controls, simultaneous loose refuse and semi-automatic cart loading, LED body and work lights. The MP8000 is designed for maximum legal payloads. Our bodies are built in 13 to 37 yard capacities, with many custom configurations available in a simple, easy to maintain configuration.

Contact us to schedule on-site demonstrations on your routes.

SPECIFIC FEATURES

- Safe and stable full eject horizontal unloading — no telescopic cylinder
- Large capacity receiving hoppers
- Easy to operate controls
- Fuel efficient engine idle operation
- User-friendly side loading
- Low maintenance — single cylinder loading operation (patent pending)
- Manual and semi-automatic cart loading
- LED body and work lights
- Available in 13 to 37 yard capacity
- No chassis drop frame requirement
